

Sure, I can provide you with an estimated cost for data analysis. The cost will depend on the amount of time required for data analysis, the number of computer units needed, and the number of data analysts required.

Assuming that you need data analysis for 3 weeks, and you will need 2 computer units and 1 data analyst for the project. The estimated cost would be:

- Computer Units (2 units x \$10 per day x 21 days) = \$420
- Data Analyst (1 analyst x \$15 per hour x 120 hours) = \$1,800
- Dataset preparation (estimated 10 hours of work) = \$100

So the total estimated cost for your data analysis project would be around \$2,320. Please keep in mind that this is only an estimation and the final cost may vary depending on the specific requirements of your project.
