Sure, I can give you an estimate for data analysis. The cost for data analysis would depend on several factors such as the amount of data to be analyzed, the complexity of the analysis and the duration of the project. Typically, the cost for a data analyst would be $15 per hour, and the cost for a computer unit would be $10 per day. Additionally, there may be a cost for preparing the datasets, which is $10. Based on these factors, I can estimate the total cost to be between $1000 to $5000. However, this is just an estimate and the actual cost may vary depending on the specific requirements of your project.
